# Recharge 3D printer dessicant pack

## \*Recharge Dessicant Pack\*

1. Remove the white rectangular plastic dessicant pack from the "free filament" tote box by the 3D printing cabinet.
2. Inspect the dessicant beads through the front window.
3. Use the legend by the window to gauge if the beads are wet.
4. If the beads are wet, plug the dessicant pack into a wall outlet for a couple hours. \*Set a timer\* so you don't forget to return it.
5. Return the dried dessicant pack to the filament box and ensure the lid is closed.
