

Lightburn Software Guide

LightBurn is layout, editing, and control software for the large format lasers:

<https://lightburnsoftware.com/>

LightBurn is only available on the desktops dedicated for use with the lasers.

LightBurn is capable of handling all stages of a laser project, from art design through to running the job on the laser.

LightBurn can also import vector and raster art from other sources: you can work on your project in other software and then import it into LightBurn when you're ready to run the job.

Help and Tutorials

LightBurn software has a YouTube page (<https://www.youtube.com/@lightburnsoftware7189/>) with lots of content to help with projects. For those new to laser cutting and etching, these videos are a good place to start:
